

Extreme Energy Events
the science into schools

FRAS-01 Recommissioning

ERICE 2018

Liceo Scientifico Statale Bruno Touschek,
Grottaferrata (RM)

Where did we leave off?

- Top chamber malfunctioning
- low signal-to-noise ratio

Grosseto 2016

Camera 3

low efficiency
suggested problems in
internal electronic

confirmed by diagnostic

EEE project in Bruno Touschek

2016/2017

requested substitution
of defective chamber

new chamber
available and
installed in
October 2018

the telescope
starts running
again

Quite similar to actual situation

Using the data:
the speed of muons

Cut

- DATE  2018/11/30
- POSITIVE SPEED  Time Of Flight > 0
- NO EXCESSIVE DATA  Run Number = 22
- TRACK QUALITY  Chi Square < 3

2018/11/30

Event Count

How to measure a, b and c?

We can estimate the maximum frequency (**a**), the average speed value (**b**) and the standard deviation (σ) (**c**) using the least squares method.

$$y = a e^{-\frac{(x-b)^2}{2c^2}}$$

Diagram illustrating the parameters in the equation:

- a**: maximum frequency
- b**: average speed value
- c**: standard deviation (σ)

J	K	L
Max Frequency	Average Speed	Standard Deviation
526,5469573	29,69542903	3,684981168

2018/11/30

**Event
Count**

Speed (cm/ns)

final measurement of speed

average speed value is

$$v = (2.97 \pm 0.02) \cdot 10^8 \text{ m/s}$$

the measure is compatible
with our knowledges

future possible goals

measure muons speed
according to different factors
like pressure, altitude,
temperature or angle

Thank you for
your attention!

A dark blue diagonal gradient bar that starts from the bottom left and extends towards the top right, covering the lower half of the slide.
